The following are suggestions and examples of available tools that may be helpful during the course of the project. Their use is not mandatory and several alternatives can be found.

Bibliography

These apps have also add-ons on Word and browsers to easily add and synchronize references

- Mendeley
- Zotero

You can also create an excel file to be able to filter according to the variable of interest and keep track of your readings highlighting the most important parts. Here is an examples of columns for the excel table:

- Article#
- Read on
- Category
- Focus
- Title
- Year
- Journal
- First author
- Main Contents
- Input
- Main Algorithm
- Dataset
- Sample size
- Methods
- Results
- Keywords
- Comments/Ideas
- Review

Search engines for Literature review

- Scopus
- Google scholar
- IEEE Access
- Pubmed

English grammar checking

- **Grammarly**
- **DeepL**

Article drafting

Examples of sentences to use in each sections (e.g. methods, results, conclusions, etc.)

- Academic Phrasebank

The following are suggestions and examples of available tools that may be helpful during the course of the project. Their use is not mandatory and several alternatives can be found.

Mind maps

Used to create schematic and effective representations of one topic with a few keywords (an example here) → For instance, they could be used to summarize the contents of a review paper

- **Xmind**

Examples of online machine learning courses

- https://www.fun-mooc.fr/en/courses/machine-learning-python-scikit-learn/
- https://www.edx.org/learn/python/harvard-university-using-python-for-research
- https://www.edx.org/learn/machine-learning/harvard-university-machine-learning-and-ai-with-python?index=product&queryId=11022151ccc43607e16d157fb24cfdad&position=2
- Videos available on youtube but there should be the course on Coursera: https://www.youtube.com/watch?v=vStJoetOxJg&list=PLkDaE6sCZn6FNC6YRfRQc_FbeQrF8BwGI
